

Customer Profile: Arkansas State University

With enrollment of over 14,000 students, Arkansas State University in Jonesboro is the second largest institution of higher education in Arkansas.

In November of 2021, the EH&S office at Arkansas State University selected CampusOptics due to the company's unique focus on the needs of Higher Education institutions. *"When we were evaluating EH&S vendors it was apparent that CampusOptics was asking all of the right questions and truly understood the Higher Education environment"* said Melissa Dooley, Director of Environmental Health and Safety.

In January 2022, Arkansas State EH&S went live with CampusOptics after a brief two-month implementation. *"We sent all our building data, chemical inventory, safety assets and inspection checklist forms to CampusOptics and when we came back from holiday break we were already using the system for inspections"* states Melissa.

"CampusOptics unlimited user license allows us to easily extend the use of the system to other

departments and areas across campus. Researchers and TA's are using CampusOptics to update chemical inventory on a quarterly basis, our construction management team uses has CampusOptics for monthly storm water permit inspections and our Biosciences Institute (ABI) is using CampusOptics to barcode and manage their research assets. Everyone has commented how easy the system is to use" continued Melissa.

The EH&S office has also used CampusOptics to create interactive, public maps of campus AEDs and Blue Light phones, conducted pre-term mold inspection checks of campus dorm facilities and document radioactive surveys, inventory and swipe tests.

EH&S also recently started using CampusOptics to improve the hazardous waste management. "The budget for hazardous waste removal is often difficult to predict and it is great to have a solution that allows us to easily report on where waste is being generated and partner with departments to identify greener and less expensive options" concludes Melissa.

“ CampusOptics unlimited user license allows us to easily extend the use of the system to other departments across campus. Researchers and TA's are using CampusOptics to update chemical inventory, our construction team for monthly storm water permit inspections and our Biosciences Institute (ABI) to barcode and manage their research assets. Everyone has commented how easy the system is to use.
