

Customer Profile: Weber State University

WEBER STATE
UNIVERSITY

Founded in 1889, Weber State University, located in Ogden, Utah, offers its nearly 30,000 students more than 225 degrees and certificates along with 20 graduate degree programs.

When Ryan Perkins joined Weber State in late 2021 as Manager of the campus 4-person EH&S team, he started looking for a solution to bring all of the institutions EH&S processes under one platform. *“Before CampusOptics we were using a combination of disparate spreadsheets, GIS, Google forms, fillable PDF’s, along with a clunky chemical inventory system, which users struggled to enter and retrieve information from.”*

“We contacted other institutions to see what solutions they had in place, however, there weren’t many systems that could accommodate all of the functions required to run a full EH&S program. CampusOptics met all of our highest priority requirements and stood out due to their ease of use and mobile capabilities,” continued Ryan.

Weber State went live with CampusOptics in January of 2023, after a brief 6-week implementation. *“I can’t speak enough about the CampusOptics team.*

They have been responsive to every question, comment and suggestion and they are always willing to help me get the most out of the system, even after initial go-live,” stated Ryan.

“We already have our main users leveraging CampusOptics to bring chemicals on campus (cradle). We also use CampusOptics Hazardous Waste capabilities to track waste containers from pickup through final manifest (grave). CampusOptics allows us to know exactly what material was received, from who and when/where it was disposed” Ryan continued.

CampusOptics unlimited user license has also allowed the EH&S team to extend the system to other departments. *“The College of Science is using CampusOptics for chemical inventory, lab inspections and disposal requests. We have also entered all of the life safety assets for the Fire Marshal’s office and know the system will help them tremendously.”*

“CampusOptics has brought all of our programs under one umbrella, allowed me to identify patterns associated with issues and incidents and to quickly provide insights on buildings, assets and chemical record” concluded Ryan.

“

“I can’t speak enough about the CampusOptics team. They have been responsive to every question, comment and suggestion and are always willing to help me get the most out of the system.”
